Note 1: *Interprovincial migration represents movements from one province or territory to another involving a change in usual place of residence. Net interprovincial migration represents the total number of people moving into a geographic area from a difference province, minus the number of people leaving a geographic area to a different province.*

Intraprovincial migration represents movement within a province or territory to another geographic area within that province or territory. (Example, someone moving from Vancouver to Victoria is considered an intraprovincial migrant). Net intraprovincial migration represents the total number of people moving into a geographic area from the same province, minus the number of people leaving a geographic area to a different geographic area in the same province.

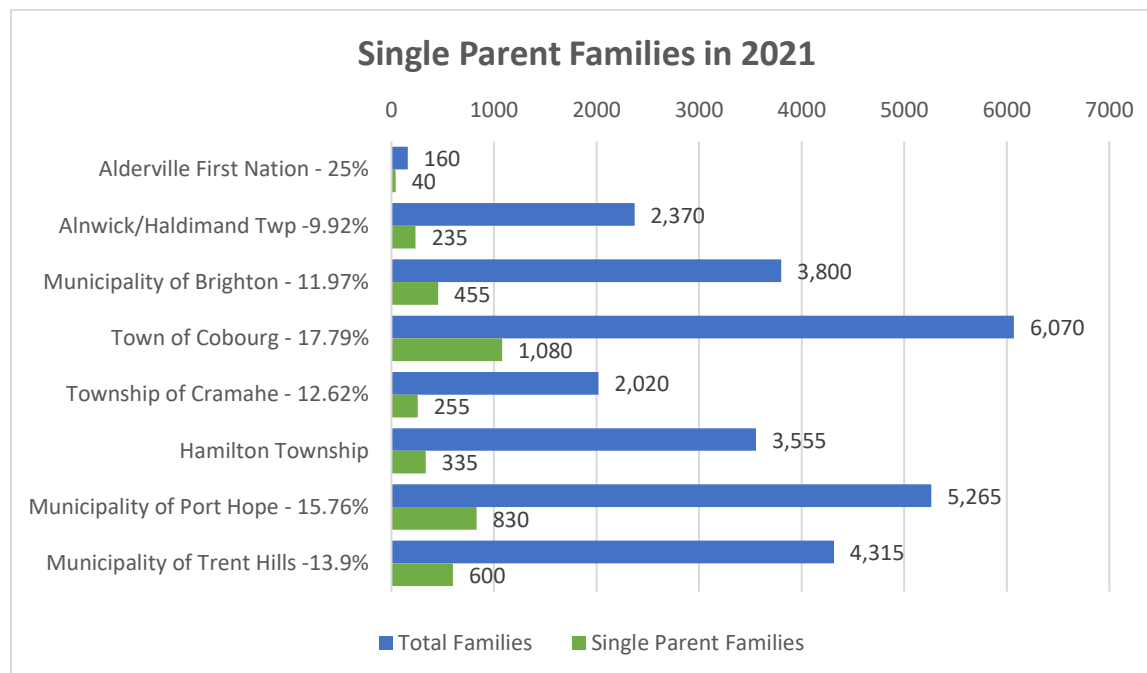

It is important to note that interprovincial and intraprovincial migration are one dimension of population change. Immigration (coming from a different country), emigration (leaving to a different country), births and deaths are other aspects of population change that are not accounted for in this indicator.

Note 2: Negative values represent more people leaving than entering a geographic area in a particular year. Positive values represent more people entering a particular geographic area than leaving a geographic area in a particular year.
